1. Locate the vehicle plug near spare tire at rear of vehicle.
2. Remove the cap or plug from the vehicle harness.
3. Plug the Hopkins® vehicle harness plug into the socket and route the 4-way flat to either side of the receiver hitch and secure it with ny-ties.
4. Locate a suitable grounding point on the vehicle's frame for the ring terminal on the white wire which is attached to the 4-way flat connector. Clean dirt, paint, and rust-proofing from the area. Drill a 3/32" hole and secure white wire with ring terminal using self-tapping screw (provided). Verify what is behind any surface prior to drilling to avoid damage to the vehicle. Do not drill into any exposed surfaces.
5. Attach the 4-way flat dust cover (provided) to the 4-way flat connector.
6. Apply a small amount of grease (provided) to the 4-way flat terminals to prevent corrosion.
7. Plug completed wire harness into the trailer 4-way flat connector.
8. Test all functions with the engine running to ensure proper operation.

TIPS:
Grease applied to the wiring terminals on a regular basis will help prevent corrosion.

Always unplug boat trailer connector before backing trailer into the water.
